

Suggestions for future work

In order to complement the work developed within the scope of this thesis, I give some suggestions for possible future works:

- Evaluate the gain in thermal conductivity of the laser-glazed thermal barrier coating system due to densification of the external region of the ceramic coating.
- Study the thermal shock/cycling resistance of the laser-glazed coatings.
- Evaluate the erosion resistance of coatings, both as-sprayed and laser-glazed.
- Study the mechanical properties of the coatings (microhardness, residual stresses) before and after the glazing process.
- Improve the numerical model by taking into account the issues referred at the end of the previous chapter.
